PROFESSIONAL SUMMARY

BS Artificial Intelligence student focused on building **real-world AI and full-stack systems** — including **cloud-deployed platforms**, **conversational AI** solutions, and **AI-assisted development workflows**. Experienced with **serverless backend architecture**, authentication systems, deployment pipelines, and **multi-AI engineering workflows** using **ChatGPT**, **Claude**, **GitHub Copilot**, and modern developer tooling. Passionate about **scalable AI products**, automation, and practical software engineering with a strong **startup mindset** and a track record of shipping **deployed, production-ready work**.

EDUCATION

University of Management and Technology (UMT)

Bachelor of Science in Artificial Intelligence

Lahore, Pakistan

Sep 2024 – Jun 2028

Punjab College

Intermediate in Computer Science (ICS)

Lahore, Pakistan

2022 – 2024

PROJECTS

PakDebateForum.com *Full-Stack Event Management & Registration Platform*

Live — Deployed

- Built and deployed a **production-ready full-stack platform** for debate event registration, submission handling, and centralized participant management serving **real users**.
- Implemented **secure JWT-based admin authentication** and protected **backend API routes** for managing events, registrations, feedback systems, and dynamic forms.
- Developed complete **CRUD workflows** using **Cloudflare Workers** and **Cloudflare D1** database within a scalable, cost-efficient **serverless cloud architecture**.
- Designed **responsive frontend interfaces** — public registration pages, event dashboards, feedback collection systems, and admin management portals — optimized for all devices.
- Integrated **AI-assisted engineering workflows** using **ChatGPT**, **Claude**, and **GitHub Copilot** for debugging, architecture planning, deployment troubleshooting, and full-stack integration.

SceneDub.ai *AI-Powered Video Dubbing Platform*

Prototype Stage — Founder

- Leading development of an **AI-powered multilingual video dubbing platform** focused on preserving **scene context**, emotional consistency, and viewing experience across dubbed content.
- Designing **multi-modal AI pipelines** involving **speech-to-text**, **contextual translation models**, and **text-to-speech synthesis** for media-focused AI processing workflows.
- Driving full **product vision**, prototype development, AI workflow architecture, and **early-stage startup strategy** as founding developer.

UMT AI Chatbot *Conversational AI for University Information*

Academic Project

- Developed a **university-focused AI chatbot** using **Botpress** and conversational AI workflows, designed to respond to queries within a **domain-restricted knowledge base**.
- Implemented **structured conversational flows** and **knowledge-base architecture** for student support and informational assistance use-cases.
- Explored **chatbot design principles** including intent recognition, fallback handling, and **response scoping** for domain-specific AI assistants.

PROJECTS (CONTINUED)

- AI271 Interactive Study Platform Educational Web Application Live Demo
- Built an **interactive study platform** for an AI programming course featuring guided notes, **syntax-reference cheat sheets**, and a **randomized quiz engine** with instant scoring and feedback.
 - Synthesized **Python**, **NumPy**, and **Pandas** course material into a structured, **mobile-friendly web app** deployed through **GitHub Pages** for public access.
 - Implemented **quiz randomization**, score tracking, **dynamic UI rendering**, and interactive frontend workflows entirely in **vanilla JavaScript** with no external frameworks.
 - Developed collaboratively using **Claude (Anthropic)** as an **AI-assisted coding workflow** while maintaining full **architectural direction**, feature planning, and deployment ownership.

- AI Image Caption Generator Multimodal AI Inference Project Personal Project
- Built and deployed an **AI image captioning project** using **open-source models** and **Hugging Face** deployment workflows.
 - Explored **image-to-text inference pipelines** and AI-generated **contextual captioning** for uploaded visual content, gaining hands-on exposure to **multimodal AI model deployment**.

- Municipal Urdu Voice Kiosk Techverse Hackathon Hackathon Project
- Contributed to concept development of an **offline Urdu AI voice assistant kiosk** aimed at helping **rural communities** access municipal services through **voice-guided interaction**.
 - Collaborated on AI system design for **low-connectivity environments**, exploring **offline NLP models** and **Urdu language processing** for social impact applications.

TECHNICAL SKILLS

- Programming Languages:** Python JavaScript C++ HTML / CSS
- AI & Development:** Prompt Engineering Conversational AI AI-Assisted Development Multi-Agent AI Workflows LLM-Oriented Development AI Workflow Design Human-in-the-Loop Systems
- Backend & Cloud:** Cloudflare Workers Cloudflare D1 REST APIs JWT Authentication CRUD Operations Serverless Architecture Cloud Deployment
- Tools & Platforms:** GitHub GitHub Copilot VS Code Botpress Hugging Face ChatGPT Claude (Anthropic) Antigravity

ACTIVITIES & INTERESTS

- Startup Building:** Founder of **SceneDub.ai** — exploring **AI media processing** and multilingual dubbing pipelines at the intersection of AI and entertainment.
- Open Source & Portfolio:** Maintaining **GitHub repositories** with documented projects, **live deployments**, and public demos for accessibility and visibility.
- Areas of Interest:** AI Product Development Autonomous AI Agents Scalable Web Systems AI for Social Impact Multimodal AI Applications
